# One operating system for the elite clinic.

AI CLINICAL INTELLIGENCE · NON-SaMD · DATA IN EUROPE (GDPR) · EN·FR·AR NATIVE

CLINIOS One Premium orchestrates the **entire experience of an elite clinic** in a single system — clinical intelligence, patient memory, multilingual cultural excellence and care coordination, on a privacy-first European foundation.

## 01 WHAT IT IS

A clinical operating system delivered as software for the clinic. It sits as the intelligent layer between the physician's expertise and the patient's data — automating the work that steals clinical hours and elevating the experience an elite patient expects. Deliberately **non-SaMD** in its current scope, it avoids the European Class IIa device pathway and reaches market faster.

## 02 CAPABILITY PILLARS

CAPABILITY	WHAT IT DOES
Clinical intelligence	Generative review and an AI insight engine that compose clinical narratives, summaries and foresight from multimodal inputs.
Patient memory	A longitudinal, structured memory of each patient — history, protocols, preferences — carried across every interaction.
Care & family coordination	Orchestrates the care team and the family circle around the UHNW patient.
Cultural Excellence	EN·FR·AR native, with the codes of the Gulf built in — the experience an elite patient base feels.
Concierge experience	A concierge-grade patient journey, multilingual, scaling to 8+ languages by signed territory.

Capability pillars shown; the detailed module taxonomy follows the live prototype.

## 03 THE AI ENGINE

The insight engine runs a clear pipeline — **multimodal ingest** → **agentic reasoning** → **generative narrative** → **neural voice & score** → **real-time render** — with an emphasis on on-device privacy. It turns a clinic's raw activity into composed, physician-validated intelligence rather than another dashboard to read.

## 04 SECURITY, DATA & COMPLIANCE

- ◆ **Data in Europe** — hosted on a dedicated private, sovereign cloud, fully GDPR-compliant.
- ◆ **Gulf data residency** — addressed per market (e.g. DHA / NABIDH in the UAE; NPHIES / PDPL alignment for KSA), confirmed at deployment.
- ◆ **Non-SaMD by design** in current scope for speed to market; the registered activity spans SaMD and non-SaMD for future optionality.

- ◆ **Privacy-first** — data minimisation, on-device processing where possible, auditable access.
